Demand More.
Demand Honeywell.
Isn’t It Time You Demand More?

Honeywell has a history of working with both utilities and their customers, giving us a unique perspective on how to quickly realize the benefits of the evolving grid. With controls in 150 million homes, 10 million buildings and thousands of industrial sites, and the experience of managing demand response and energy efficiency programs for more than 100 utilities, Honeywell has the offerings and experience to empower smart energy users.

And our support is unparalleled. Honeywell’s experience and resources, including program design, marketing, customer service centers, operations support, technical services, reporting systems and IT resources, provide best-in-class solutions and performance that deliver predictable results and minimize risk.

Demand Response

When it comes to implementing a demand response solution, the questions you face are probably not “if” or “when,” but rather, “how” and “with whom?” Honeywell has answers to all of these questions. As a global technology leader in demand response, Honeywell implements effective, turnkey demand response solutions that build high customer enrollment and satisfaction, and ultimately deliver significant, reliable kilowatt savings.

Honeywell is the partner of choice for load-control programs across the country. We have installed more than 1 million load-management devices on an extensive variety of equipment. Our field implementation teams have placed more than 970 MW under active load-control for our electric utility clients. We’ve managed gateway pilots in 50 locations, and we mass-market residential and commercial programs impacting hundreds of thousands of customers.

Energy Efficiency

Over the past 30 years, Honeywell has administered various types of energy efficiency programs for electric, water and gas utilities across the country. Energy efficiency programs offer utilities an opportunity to cost-effectively reduce customer energy usage while providing significant value to customers. These programs range in terms of technology, customer segment, delivery model and volume of customers, and are customized to the needs of the utility. Some of our programs include:

- Energy Audit and Home Performance
- Energy Affordability
- Market Transformation Initiatives
- Direct Install
- Residential HVAC Tune-Up and Replacement
- Residential New Construction
- Multi-Family
- Retail Lighting and Appliances
- Commercial Audit
- Commercial Prescriptive
- Commercial HVAC and Retro-Commissioning
- Custom Programs

Meeting Demands

Design and Implementation – Our experts can help you plan and launch demand side management programs from the ground up, so you know what to expect in terms of costs, timelines, enrollment and results.

Installation – Our trained installation teams provide a turnkey program that ensures timely delivery and exceptional focus on your customers, including long-term support.

Product – We install a variety of leading-edge load-control devices, such as the UtilityPRO™ thermostat, installed in more than 400,000 homes and businesses across North America.

Experience – Proven go-to-market strategies and project management experience to support utility partners, including contractors, distributors and retailers.

Expertise – Technical expertise in residential and commercial installations, evaluation, measurement and verification, along with general technical support.

Technology – Proven, robust work order management and contractor portal system which provides real-time work order automation and seamless integration utility systems.

Quality – Our integral focus on safety, efficiency and ongoing process improvement provides top-notch results, readily monitored and audited via our end-to-end IT processes.

Marketing & Call Center Support – We can generate leads and seamlessly enroll, schedule and support your customers.
